3 General

Jotron manufactures safety products designed for the search and rescue of human lives and property. For this product to be effective according to the design parameters, it is imperative that it is handled, maintained, serviced and stowed in accordance with this manual.

All information contained within this manual has been verified and is to Jotron's knowledge correct. Jotron reserves the right to make changes to any product(s) or module(s) described herein to improve design, function or reliability, without further notice.

Jotron is not liable and cannot be held responsible for any injury or damages caused directly or indirectly by an error or omission of information, incorrect or misuse, breach of procedures or failure of any specific component or part of this product.

Jotron documentation can be downloaded from jotron.com.

4 Standards

Jotron declares that this this product is compliant with IMO and SOLAS regulations and both MED and RoHS directives.

A copy of the declaration of conformity can be downloaded from jotron.com.

The Tron 60S/GPS has been verified, tested and meets the following product standards:

IEC 61097-2 Ed. 3.0	Global maritime distress and safety systems (GMDSS) Part 2: Cospas-Sarsat EPIRB – Satellite emergency position indicating radio beacon operating on 406 MHz – Operational and performance requirements, methods of testing and required test results.
IEC 60945 Ed. 4.0 including	Corrigendum 1 – Maritime navigation
IEC 608945 Corrigendum 1	and radiocommunication equipment and
	systems – General requirements –
	Methods of testing and required results.
EN 300 066 v.1.3.1	Electromagnetic compatibility and radio
	spectrum matters (ERM); Float-free
	maritime satellite – EPIRB operating in
	the 406,9 MHz to 406,1 MHz frequency
	band; technical characteristics and
	methods of measurement
IEC 63000:2016	Technical documentation for the
	assessment of electrical and electronic
	products with respect to the restrictions
	of hazardous substances
ISO 14001	Environmental management systems
ISO 9001	Quality management principles

In accordance with SOLAS regulations, the following controls must be followed:

IV/15.9.2 of SOLAS 1974, in accordance with MSC/Circ. 1039 guidelines	SOLAS regulation for Shore Based Maintenance (SBM) of Satellite EPIRBs within 5 years if: Passenger ships (> 12 passengers) and cargo ships (> 300GT) engaged in international voyages, shall perform SBM as follows: Latest by the date of the EPIRB label with this text, or the battery Label, whichever is first. And when this EPIRB becomes due for SBM in accordance with national requirements.
IV/15.9.2 of SOLAS 1974 as amended to in accordance with MSC/Circ.1039 guidelines	SOLAS regulation for shore-based maintenance of satellite EPIRBs within 5 years, or by the date of battery expiry, whichever is first. As it applies to maintenance (servicing and tested) for vessel that requires GMDSS compliant equipment.
SOLAS Chapter IV reg. 15.9.2 and IMO MSC. Circ. 1039	Regarding battery change. This must be completed at a Jotron SBM authorized location and it must also be approved by the VDR manufacturer. The interval is dependent on the flag-state administration. If neither international nor national regulations apply to the EPIRB then the battery may be changed by an authorized Jotron partner/distributor.
IMO - MSC/Circ.1040 & rev.1 as required by SOLAS IV/15.9	Regarding yearly testing of 406 MHz on satellite EPIRBs. Rev.1 requires that annual testing be performed by an authorized radio-surveyor or an authorized person who is trained and certified by Jotron.

IMO MSC.1/Circ.1222	Regarding an additional yearly testing requirement for the Tron 40VDR float free capsule.
IMO COMSAR/Circ. 32 (latest revision)	Correct installation and storage of this product.

5 **Product description**

The Tron 60S and Tron 60GPS are Emergency Position Indicating Radio Beacons (EPIRB), the only difference between them is that the Tron 60S does not include a GPS.

The purpose of the Tron 60S/GPS is to send a primary alarm to the search and rescue authorities. These EPIRB's send a distress signal when activated, transmitting the ID of the ship.

The Tron 60S and Tron 60GPS are buoyant and activate automatically when immersed in water. The EPIRB operates both automatically and manually.

There are two mounting brackets available for use with both the Tron 60S and Tron 60GPS, a float free bracket and a manual bracket. Both brackets are specially designed with an internal safety switch (water detectors), that prevents the EPIRB from inadvertently being activated by moisture or water spray when placed in the bracket.

The Tron 60S/GPS includes the following components:

- Cospas-Sarsat emergency EPIRB
- GPS (Tron 60GPS only)

5.1 Product image ON

Figure 1 Image - Tron 60S/GPS

5.2 Cospas-Sarsat system description

Cospas is an acronym for the Russian words Cosmicheskaya Sistyema Poiska Avariynich Sudov, which means "Space System for the Search of Vessels in Distress". The Cospas-Sarsat system was introduced in 1982 as a worldwide search and rescue system with the help of satellites covering the earth's surface. Between 1982 and 2018 alone this system has aided in rescuing at least 48,738 individuals in 14,531 search and rescue situations. Currently, the system consists of 5 functional satellites in a polar orbit constellation, these satellites cover the entire earth's surface and receive the emergency signal from the 406 MHz transmitter within the Tron 60S/GPS, more polar orbiting satellites will be available in the future, giving a faster location and rescue time.

In addition, several geostationary satellites are equipped with a 406 MHz transponder. These satellites are not able to locate the Tron 60S/GPS but will give an early warning to the rescue forces, minimizing the time from an emergency occurs till the rescue forces are at the site.

Each EPIRB in the system is programmed with its own unique code, therefore, it is vital that the ships data supplied to the dealer upon purchase or when the Tron 60S/GPS was obtained is correct. It is also important that the EPIRB is registered in the database for each country. This database is normally located in the same country where the ship is registered.

5.2.1 Signal detection

When a Tron 60S/GPS is activated (manually or automatically) it transmits an analogue signal on the 121.5 MHz frequency and digital signal on the 406.037 MHz frequency. After the Tron 60S/GPS is activated, the next passing satellite will detect the transmitted signal and relay it to an antenna at a local user terminal (LUT) ground station.

Figure 2 Illustration - signal detection

5.2.1.1 Advantages of an included GPS

This product has been designed to operate with the Cospas-Sarsat system. With the inclusion of a GPS, this EPIRB enhances lifesaving capabilities. The GPS position is updated every 5 minutes.

Below is a comparison between Tron 60S and Tron 60GPS depending on the detecting satellite, polar orbiting or geostationary.

Table 1 Satellites - LEOSAR & GEOSAR

5.2.2 EPIRB registration

Normally the Mission Control Centre (MCC) will contact the vessel, or the contact person registered in the shipping register and/or EPIRB register (ship owner, family member etc.) before alerting the Rescue Coordination Centre (RCC). This is to determine if the alarm from the EPIRB is a false alarm and a rescue operation can be avoided. Hence, it is important that the data in the shipping register and/or EPIRB register is correct.

Register the beacon with the national authority associated with the country code in the hexadecimal identification (15 Hex ID) of the beacon. Register online with the Cospas-Sarsat IBRD, if the country does not provide a registration facility and the country has allowed direct registration in the IBRD: www.406registration.com

If the country operates a national beacon registry, obtain a point of contact at <u>www.cospas-sarsat.org</u> (review C/S S.007 Cospas-Sarsat Handbook of Beacon Regulations).

Suggested EPIRB registration links:

USA: <u>http://beaconregistration.noaa.gov</u> and UK: <u>http://www.mcga.gov.uk</u> (search - EPIRB registration)

USA registration card:

Suggested registration link: <u>http://beaconregistration.noaa.gov</u>

It can also be registration via mail or fax. Downloadable forms are available from the website.

The Emergency Contact information and telephone number must be accurate as it is what will be used to validate an alert. The United States Coast Guard (USCG) will only launch an immediate rescue if the beacon registration and approximate location details can be confirmed. Delays will occur whilst further alerts from the same source are received and verified.

Registration address:

NOAA/SARSAT Beacon Registration

NSOF, E/SP053

1315 East West Hwy

Silver Spring, MD 20910

5.2.3 False alerts transmitted

If for any reason an inadvertent activation or false alarm occur, you must report it to the nearest search and rescue authorities. The following information must be reported:

- 15-digit unique identifier number (UIN) on the beacon label.
- Date and time of activation (including time zone).
- Cause and duration of the activation.
- Location of the beacon at the time of activation.

To report a false alarm in the United States, contact the US Coast Guard at 1-855-406-USCG (8724)

To report a false alarm outside of the US, contact the national authority where the beacon is registered.

6 Functional description

6.1 Tron 60S/GPS components

An overview of the components.

Figure 3 Illustration - Tron 60S/GPS components

ltem no.	Item

4	Main switch
5	Sealing
6	Water detectors
7	Lower housing

Table 2 Tron 60S/GPS components

6.2 Main module

The main board includes all electronic circuitry and the main switch.

6.3 Antenna

The antenna for the Tron 60S/GPS is omnidirectional and includes a LED flash at the top.

6.4 Battery pack

The battery pack supplies the EPIRB with power to keep the EPIRB transmitter active for 48 hours when activated, and for test sequences. The battery pack is integrated within the product.

Two water detectors are mounted in the battery pack. These two metal contacts are located one on each side of the lower housing.

Do not touch the metal contacts as this can be detected as water and activate the EPIRB.

6.5 Brackets

The following two brackets are available for mounting the Tron 60S/GPS:

- FB-60 float free bracket
- MB-60 manual bracket

6.5.1 FB-60 float free bracket

The FB-60 float free bracket is a covered bracket with a hydrostatic release unit (HRU). The HRU releases the Tron 60S/GPS if the bracket is submerged to a depth of 2-4 meters when a ship is sinking. When the Tron 60S/GPS is mounted in the FB-60, it operates as an automatic float free unit.

Figure 4 Image - FB-60 float free bracket

6.5.2 MB-60 manual bracket

The MB-60 manual bracket is a simple bracket and can be used by a ship that does not require a float free bracket or those that require an additional EPIRB. For example, to use in the wheelhouse or another protected area. A MB-60 is also used as a shipment bracket when sending replacement units. When the Tron 60S/GPS is mounted in the MB-60 bracket, it operates as a manual unit.

Figure 5 Image - MB-60 manual bracket

7 Installation

The Tron 60S/GPS must be installed and stored as described in this manual.

Do not install the EPIRB near strong magnetic fields, otherwise the EPIRB may be activated.

7.1 Brackets

Brackets should be mounted in a well protect area from environmental conditions such direct water spray, chemicals, oil, exhaust and vibrations.

7.1.1 Mounting the FB-60 float-free bracket

For best operation, the FB-60 should be mounted as high as possible within these requirements:

- The EPIRB should be mounted so that it can be released freely without getting caught in a railing or other superstructure.
- The EPIRB should be mounted so that it can be easily released by a person and brought to a survival craft. Do not mount on a radar mast or on any other surface that can only be reached by vertical ladder.

To mount the FB-60, do the following:

1. Using 5mm bolts mount the bracket according to the dimensions drawing.

The FB-60 can be mounted horizontally or vertically. A vertical position is recommended, however, do what is best for maintenance and operation.

Figure 6 Illustration - FB-60 float free bracket dimensions

7.1.2 Mounting the MB-60 manual bracket

Ensure the bracket is mounted in an easily accessible location so it can be removed quickly in the case of an emergency.

To mount the MB-60, do the following:

1. Using 5mm bolts mount the bracket according to the dimensions drawing.

The MB-60 can be mounted horizontally or vertically. A vertical position is recommended, however, do what is best for maintenance and operation.

Figure 7 Illustration - MB-60 manual bracket dimensions

7.2 Replacing the battery

The Tron 60S/GPS battery must be changed at Jotron shore based maintenance (SBM) authorized workshop to be GMDSS compliant.

If your Tron 60S/GPS is not under any international or national regulations, battery can be change by authorized Jotron representatives/partners/ dealers.

8 Operation instructions

Tron 60S/GPS is designed to be operated either manually or automatically. The EPIRB will automatically start to transmit when immersed into water. The Tron 60S/GPS has an internal safety switch which prevents inadvertent activation through moisture and water spray when located in the bracket. The EPIRB battery lasts for 48 hours from activation.

This EPIRB should only be used in an emergency. Should an EPIRB be used for any other reason, the user will be held responsible.

Replace the battery after the EPIRB is operated for any purpose other than a test.

8.1 Manual operation

Keep the EPIRB in an open area and away from metal objects to ensure best performance (this includes ship construction).

Do not tie the lanyard to a ship during an emergency, this prevents the EPIRB from functioning if the ship sinks.

8.1.1 Out of bracket

To manually operate the Tron 60S/GPS out of the bracket, do the following:

1. Pull the safety ring holding the main switch.

2. Move the main switch to the ON position (left).

The LED indicator located at the top of the antenna will start to flash. This indicates that the EPIRB is operational.

To stop transmission, move the main switch to ready position.

8.1.2 Stored in the FB-60 float free bracket

To operate the Tron 60S/GPS stored in the FB-60 bracket, do the following:

It is not recommended to operate a Tron 60S/GPS inside a life raft or under a cover or canopy.

The EPIRB can drop out of the FB-60 bracket when releasing the top cover.

1. Remove the cotter pin from the bracket.

2. Remove the cover.

3. Remove the EPIRB from the bracket.

4. Pull the safety ring.

5. Push and move the main switch to the ON position.

The LED indicator located at the top of the antenna will start to flash. This indicates that the EPIRB is transmitting.

6. Tie the EPIRB lanyard to yourself or the survival craft.

To stop transmission, move the main switch to the ready position and secure the safety pin in place.

8.2 Automatic operation from the FB-60 float free bracket

During automatic release the following will occur:

1. When the bracket reaches a water depth of 2-4 meters or 6-13 feet the EPIRB will be automatically released.

- 2. The EPIRB will then float to the surface and start transmitting.
- 3. Transmission is indicated by the flashing LED light and will continue until the EPIRB is lifted out of the water and dried off.

The transmission can also be stopped by placing the EPIRB back into the FB-60 bracket.

Figure 8 Illustration - automatic operation of a FB-60 float free bracket

8.3 Wrist strap

In an emergency the EPIRB can be carried using a Jotron wrist strap. Use the strap when it is necessary to have both arms free.

To use the wrist strap, do the following:

1. Pull the wrist strap out of the pocket.

2. Place your arm through the loop of the strap.

It is not possible to put the wrist strap back into the pocket after use.

9 Maintenance

The Tron 60S/GPS requires the following maintenance:

Timing	Requirements
Every month	Both the EPIRB and the bracket should be inspected. The EPIRB should be removed from the bracket and tested. Perform inspection and testing following the steps outlined in this manual. Every 4 th month, perform an extended self-test (GPS – Tron 60GPS only) instead of the normal self-test.
Every year	Test in accordance with MSC. 1040, the annual performance test.
Every 2 years	In addition to the regular yearly inspection and testing, the HRU should be replaced (including the plastic bolt, FB-60 only). Mark the new expiry date on the label.

Everv 4-5	If applicable SBM must be performed at a Jotron SBM authorized	
years	1039 SBM. The SMB interval is decided by the flag state administration.	
Every 10 years	Jotron recommends that the Tron 40VDR and FB-40 float free bracket are replaced at this time.	

Table 3 Tron 60S/GPS maintenance requirements

9.1 Inspection

The lifetime of any equipment depends on how well you take care of it. Inspect both the Tron 60S/GPS and the bracket for defects.

To inspect, do the following:

- 1. Ensure the bracket cover is not blocked (this hinders the release functionality of the EPIRB).
- 2. Ensure the EPIRB and bracket are clean (no paint, oil and other chemicals).
- 3. Verify the lanyard is attached (on the EPIRB and not the vessel)
- 4. Verify the expiry date of EPIRB battery and the date for the next SBM.
- 5. Verify the expiry date of HRU (month/year)

9.2 Self-Testing

It is important to perform self-tests on the equipment regularly to ensure proper operation. This also ensures the EPIRB is in good working order and therefore ready for use in a potential emergency.

There are two types of tests:

- 1. Normal self-test
- 2. Extended self-test including GPS test

Limit normal self-tests to a maximum of once a month and extended self-tests to once every 3 months, as this reduces the lifetime of the EPIRB battery. The Tron 60GPS can only complete 60 extended selftests during the lifetime of the battery.

9.2.1 Normal self-test

The purpose of a normal self-test is to verify that the EPIRB functions as it should. During this test, a short test signal on 121,5MHz and 406,037MHz are sent to test the output of the transmitter and operation of the EPIRB. While transmitting the test signal, the battery voltage and status, output power and phase lock are tested. When testing the 406MHz transmitter a test message is transmitted, this test message is coded with a special synchronization code that will not be recognized as an actual alert by the Cospas-Sarsat satellites.

To perform a normal self-test, do the following:

- 1. Remove the EPIRB from the bracket.
- 2. Move the switch from the ready position to the test position and hold for 15 seconds.
- 3. Release the switch.

Keep hands and/or other objects away from the antenna.

A single flash indicates a passed test. If this is not the result, please refer to the table in chapter 9.2.1.1 for error codes.

Figure 9 Illustration - Normal self-test

9.2.1.1 Error codes (flashes)

If the normal self-test detects an error in the EPIRB module, one or more of the following will occur:

Number of Flashes:	Error codes
2	Low power on 406 MHz transmitter
3	Low battery voltage
4	Low power on 121.5 MHz transmitter
5	PLL on 406 MHz transmitter out of lock
6	PLL on 121.5 MHz transmitter out of lock
7	EPIRB module not programmed or programming not complete

Table 4 Tron 60S/GPS Normal self-test error codes (flashes)

9.2.2 Extended self-test (GPS test) (only Tron 60GPS)

During an extended self-test, a GPS position is received. This position is sent on 406.037 MHz and can be verified using an EPIRB tester.

Keep hands and/or other objects away from the antenna.

To perform an extended self-test including GPS, do the following:

- 1. Remove the EPIRB from the bracket.
- 2. Move switch to the test position twice within 3 seconds and release back to the ready position. 2 beeps verifies that the GPS position is received.
- 3. Perform a normal self-test by following the procedure as described in chapter 9.2.1

The EPIRB will beep shortly every 3 seconds until the GPS position is acquired.

2 beeps verify that a position is received. If this is not the result, please refer to the table in chapter 9.2.2.1 for error codes.

9.2.2.1 Error codes (beeps)

If the extended self-test detects an error, one of the following will occur:

Number of Beeps:	Error codes
5	Did not acquire GPS position.
10	Number of extended self-tests above limit (>60)

 Table 5 Tron 60GPS Extended self-test error codes (beeps)

10 Replacing the hydrostatic release unit (HRU)

A replacement HRU must be purchases separately and is supplied in a kit. The HRU kit includes a special bolt and fittings.

Only a Jotron approved hydrostatic release unit kit must be used, as it is type approved.

The EPIRB can drop out of the FB-60 bracket when releasing the top cover.

To replace the release mechanism, do the following:

1. Remove the cotter pin from the bracket.

2. Remove the cover.

3. Remove the EPIRB from the bracket.

4. Press down and hold in place the spring-loaded catapult, then remove the HRU by sliding it out of the locking slot.

5. While holding the catapult down, slide the new HRU into the locking slot.

- 6. Place the EPIRB back in the bracket.
- 7. Close and secure the top cover using the cotter pin.

11 Test and maintenance records

Below is an overview of all test and control details.

Date	B/H/T*	Signature	Inspector name

*B=New battery, H=New HRU, T=Test

12 Battery safety information

Туре:	Primary lithium metal
Lithium metal content:	Below 1gram lithium pr battery cell
Approximate weight:	116grams
Chemical system:	Lithium iron disulfide
Designated for recharge:	No

For information regarding the physical and chemical properties, the potential health and safety measures and the environmental effects of the battery used with this product, refer to the manufacturer's safety information documentation.

The safety information is available for download at <u>jotron.com - product</u>. http://jotron.com/product/tron-60s-epirb-manual-bracket/.

12.1 Handling and storage

This product should be stored in a cool and well-ventilated area. Elevated temperatures can result in a reduction of battery life. Locations that handle large quantities of lithium batteries must ensure the batteries are isolated from combustibles. A short circuit for a few seconds will not seriously affect the battery. A prolonged short circuit will cause the battery to lose energy, generate significant heat and can cause the safety release vent to open. The contents of an open battery, including a vented battery, when exposed to water, may result in a fire and/or explosion. Crushed or damaged batteries may result in a fire. A battery that is disassembled or exposed to water, fire or high temperatures can explode or leak causing burns.

12.1.1 Transportation

The product described in this manual is subject to follow special packing instructions and/or transportation regulations. Information regarding these regulations (in accordance with ICAO/IATA, IMDG code and/or ADR/RID) is included in the product safety information (PSI) and/or in the test summary report (TSR) (in accordance with UN test 38.3.5) and available for download

at <u>jotron.com - product</u>. http://jotron.com/product/tron-60s-epirb-manual-bracket/.

13 Technical specifications

13.1 Product specification

Battery type:	Lithium iron metal
Battery capacity:	12V/2.9Ah
Housing material:	Glass reinforced polycarbonate
Unit dimensions (H/W/D):	340mm x 128mm x 128mm
Weight:	700grams
Compass safe distance:	0,85meters
Temperature operating:	-20°C to + 55°C (-4°F to +131°F)
Temperature storage:	-30°C to + 65°C (-22°F to +149°F)
Operating life:	Minimum 48 hours at -20°C
Lanyard length:	>5meters
Lanyard strength:	>25kg

13.2 COSPAS-SARSAT transmitter

Frequency:	406.037MHz ±2ppm
Output power:	5W
Protocols:	Location protocols (maritime, serialized)
Modulation:	Phase modulation 1.1rad ±0.1rad
Data encoding:	Bi Phase L
Stability:	Short term: ≤ 2x10e ⁻⁹ Hz
	Medium term: ≤ 1x10e-9 Hz
	Residual noise: $\leq 3x10e^{-9}$ Hz
	Bit rate: 400bps
	Antenna: built-in omnidirectional

13.3 Navigation device (only Tron 60GPS)

Type:	56 channel GPS receiver
Antenna:	Chip type

13.4 Homing transmitter

Frequency:	121.500MHz
Output power:	Up to 100mW
Modulation:	A9, AM sweep tone between 300Hz and 1600Hz
	Sweep range: 700Hz
	Sweep rate: 2.5Hz
Stability:	10ppm over temperature range
Antenna:	Omnidirectional

13.5 Brackets

13.5.1 FB-60 Float-free bracket

Materials:	ASA (acrylonitrile styrene acrylate)
Dimensions (H/W/D):	385mm x 151mm x 148mm
Weight:	850grams
Release mechanism:	Jotron HRU
Temperature operating:	-30°C to + 65°C (-22°F to +149°F)
Temperature storage:	-30°C to + 65°C (-22°F to +149°F)

13.5.2 MB-60 Manual bracket

Materials:	PA6 + 30% fibre glass (Polyamide)
Dimensions (H/W/D):	156mm x 134mm x 98.5mm
Weight:	150grams
Temperature storage:	-30°C to + 65°C (-22°F to +149°F)

14 Optional accessories

For an overview of the available optional accessories for this product, refer to jotron.com.

15 Spare parts

For an overview of the available spare parts for this product, refer to <u>jotron.com</u>.

15.1 Counterfeit spare parts

Ensure that all spare parts being fitted to this product are only original spare parts manufactured or approved by Jotron.

Any use counterfeit parts will invalidate the product type-approval certificate.

16 Recycling and disposal

This product should not be disposed as normal waste and must be handled in accordance with the applicable federal, state and local waste disposal regulations in the country where the equipment is used.

17 Warranty

All Jotron products are warranted against factory defects in materials and/or workmanship during the warranty period.

Refer to the sales terms and conditions for specific warranty information regarding this product.

18 Service

All services such as testing, installation, programming, replacement, marking and battery exchange are provided by an authorized Jotron service agent.

Improper service or maintenance may destroy the functionality and/or performance of this product.

Jotron does not accept any responsibility for the dismantling or reassembling of any Jotron product that occurs externally from a Jotron authorized facility and/or is handled by someone other than an authorized, trained and certified person.

18.1 Service agents
